

SELECTED EXPERIENCE

Vape-Jet - Director of Operations 2025-Present

- Leads AI-first operating transformation across production, purchasing, quality, customer success, support, engineering issue flow, ERP/Odoo, Jira, HubSpot, Slack, telemetry and AI-assisted workflows.
- Connects factory, field, customer and machine-fleet signals into prioritized work, earlier risk detection, cleaner handoffs, dashboards, standard work, training and accountability.
- Works in a software-enabled robotics and machine-vision environment with approximately 1,000 fielded robots informing support and operating feedback loops.

DudeWorth - Founder / AI and Automation Advisor 2017-Present

- Develops AI-readiness and opportunity frameworks spanning value, feasibility, data readiness, governance, adoption burden, reuse and time-to-value.
- Designs agentic workflow patterns using structured context, retrieval, AI agents, human judgment, escalation, decision records, evaluation and governance rails.
- Advises on AI-enabled operations, logistics technology, warehouse automation, AMRs, ASRS, cobots, transportation systems, network analysis and workflow design.

Amazon - Operations Management / Site Leader 2014-2018

- Led launch and execution for Amazon Prime Pittsburgh in a 24/7 customer-backward environment supporting approximately five million second-day orders annually.
- Built leadership routines, labor planning, throughput visibility, escalation paths, standard work and operating mechanisms across safety, quality, throughput and customer experience.
- Contributed to logistics innovation through Prime Air research and Amazon Flex geolocation concepts.

Compunetics - Director of Operations and Engineering Management 2000-2013

- Progressed through R&D; program management, production management, strategic acquisition, operations management and director-level leadership.
- Led engineering, manufacturing, quality, customer delivery and complex technical programs in advanced electronics and high-reliability environments.
- Built quality systems, standard work, root-cause practices, performance measures and process controls.
- Collaborated with high-consequence customers and partners including DoD, CERN, Intel and AMD; published industry articles, delivered technical talks and participated in the HyperTransport Consortium.

ADJACENT OPERATING DEPTH

Cardinal Building Products - Regional Director 2021-2023

- Built the company's first remote regional operation.
- Modernized distributed customer, CRM, commercial, fulfillment, logistics, digital marketing, SEO and online-buying workflows.
- Advanced AI-enhanced transportation-management and route-planning concepts.

ZeusVu - Chief Pilot, Autonomous Systems and Aerial Data Operations 2018-2022

- Led regulated drone operations across medical, energy, logistics, real-estate and restricted-airspace contexts with a 100% safety record and no FAA incidents.
- Developed TensorFlow-based concepts for automated aerial inventory and computer-vision-enabled field intelligence.
- Designed medical drone delivery and chain-of-custody concepts connecting technology, risk, stakeholders and governed execution.

Executive profile

Builds operating mechanisms across customer operations, service and support workflows, technical delivery and AI-enabled work. Strongest where platforms, teams, evidence and human judgment must become one repeatable operating system.

Role-aligned capabilities

- Post-merger operating integration
- AI-enabled service workflows
- Service-desk and support operations
- Standard work and escalation
- Human-in-the-loop authority design
- Operational telemetry and scorecards
- Customer deployment playbooks
- Lean / Gemba / Six Sigma
- Cross-functional technical translation

Transfer thesis

Run an AI-enabled workflow inside the operating system; leave behind a service definition that can be securely adapted, measured and owned in a customer environment.

Measures that matter

- Customer effort and first-contact resolution
- Cycle time, handoffs and repeat incidents
- Cost to serve and rework
- Decision traceability and exceptions
- Internal proof-to-offer latency

Operating through-line

Across customer operations, AI and automation, high-reliability engineering, logistics and autonomous systems: make complex work visible, clarify ownership and escalation, establish repeatable practice, and connect technology to measurable customer outcomes.

Pittsburgh, PA - actively relocating to Tampa Bay | 412.287.8640 | russelldudek@gmail.com
<https://russelldudek.github.io/XTIUM/>

[linkedin.com/in/russelldudek](https://www.linkedin.com/in/russelldudek)

PROFESSIONAL AND CIVIC LEADERSHIP

- Enviro Social Capital** - Chairman of the Board 2014-2017
- Co-founded and led a public-private impact initiative focused on sustainable infrastructure, green finance and civic transformation; helped shape a \$200 million Social Impact Bond feasibility concept.
- IEEE** - CMPT and EDS Pittsburgh Chapter Chair 2012-2016
- Led regional technology programming connecting industry, academia, STEM outreach, electronics, manufacturing and emerging technology.

SELECTED EXECUTION EVIDENCE

AI workflow design

- Structured context, retrieval, agentic workflows, human review, evaluation, escalation and governance rails.
- AI-readiness frameworks spanning value, feasibility, data, adoption burden, reuse and time-to-value.

Operations systems

- Direct workflow integration across ERP/Odoo, Jira, HubSpot, Slack, dashboards, telemetry, standard work and training.
- Factory, field, customer and machine signals translated into prioritized work, risk visibility and accountability.

High-reliability delivery

- Quality systems, root-cause practice, process controls and technical programs in advanced electronics environments.
- Cross-functional translation among engineering, manufacturing, quality, customers and high-consequence partners.

OPERATING MECHANISMS FOR XTIUM

- Make customer promises, workflow triggers, decision rights and exception ownership visible.
- Separate AI recommendation, approved automation and consequential human authority.
- Use telemetry to distinguish faster work from better outcomes and identify repeatable patterns.
- Translate internal proof into customer prerequisites, controls, adoption assets and review cadence.
- Retire needless process variation while protecting customer, regulatory and service-line context.

Technical toolkit

- Agentic AI and LLM workflows
- RAG patterns and structured context
- Human-in-the-loop design
- Python, SQL and JavaScript
- TensorFlow and Tableau
- ERP/Odoo, Jira and Confluence
- HubSpot, Slack, GIS and mapping

Education

University of Pittsburgh

Bachelor of Science. Academic grounding includes materials science, physical chemistry and biology-related studies.

Credentials

- Google AI Essentials
- IBM Enterprise Design Thinking Practitioner
- Six Sigma Certification
- OSHA 10

Transfer advantage

Outside-in operating value across 24/7 customer operations, high-reliability technology, technical delivery, AI-enabled workflows and operating mechanisms that turn complexity into owned, measurable work.

Relocation

Currently based in Pittsburgh and actively relocating to the Tampa Bay area. This document does not claim current Florida residency.

Verified scale and context

- Approximately 1,000 fielded robots informing support feedback loops
- Approximately five million second-day orders annually at Amazon Prime Pittsburgh
- 100% drone safety record with no FAA incidents; high-consequence partner contexts include DoD, CERN, Intel and AMD

SERVICE TRANSLATION OPERATING MODEL

1. Promise

Define the customer outcome, scope and service commitment.

2. Authority

Separate AI recommendation, approved automation and human decision rights.

3. Evidence

Expose baselines, telemetry, exceptions, adoption and economics.

4. Ownership

Assign service, escalation, review and continuous-improvement accountability.

Decision cadence

Baseline -> pilot -> review -> scale, adapt, hold or stop. Each decision requires a defined customer outcome, authority boundary, evidence standard and accountable owner.
