

ILLUSTRATIVE 120-DAY ENTRY PLAN

Read and define

Pittsburgh, PA - actively relocating to Tampa Bay | 412.287.8640 | russelldudek@gmail.com
linkedin.com/in/russelldudek | https://russelldudek.github.io/XTIUM/

Operating posture

Listen before prescribing. Preserve what the current system protects. Baseline before targeting. Treat every company-specific idea as a hypothesis until validated.

DAYS 0-30 - READ THE SERVICE REALITY

- Map service promises, platforms, operating variants, regional differences, customer segments and current integration decisions.
- Listen across CEO/COO, product, AI engineering, security, service desk, network operations, cloud, communications, customer success, sales and onboarding.
- Identify hidden handoffs, conflicting ownership and duplicated tools behind one-accountable-partner delivery.
- Baseline measurement categories by service line before setting targets.

OUTPUTS

Operating-variant map | Decision-rights map | Baseline inventory | Two lighthouse candidates

DAYS 31-60 - DEFINE LIGHTHOUSE WORKFLOWS

- Select two workflows using customer value, evidence availability, cross-service relevance, adoption burden and manageable risk.
- Complete the six-field One Service Definition for each.
- Identify process/platform variation to standardize, bound, adapt or retain.
- Agree evaluation, security, rollback, customer-communication and review requirements.

OUTPUTS

Two service definitions | Exception taxonomy | Measurement plan | Governance cadence

DECISION DISCIPLINE

Scale when the outcome is repeatable, risk is acceptable, ownership is clear, economics are credible and adaptation burden is low. Adapt when the core is sound but context matters. Hold when evidence, authority, security, ownership or adoption is incomplete. Stop when value or trust is insufficient.

ILLUSTRATIVE 120-DAY ENTRY PLAN

Prove and transfer

Pittsburgh, PA - actively relocating to Tampa Bay | 412.287.8640 | russelldudek@gmail.com
linkedin.com/in/russelldudek | <https://russelldudek.github.io/XTIUM/>

Operating posture

Listen before prescribing. Preserve what the current system protects. Baseline before targeting. Treat every company-specific idea as a hypothesis until validated.

DAYS 61-90 - PROVE INTERNALLY

- Run the definitions inside XTIUM with frontline participation and explicit human authority.
- Observe actual exceptions, workarounds, override patterns, failure modes and customer-experience consequences.
- Measure speed, quality, economics, trust and adoption using disclosed baselines and units.
- Revise standard work, training, escalation, telemetry and ownership based on evidence.

OUTPUTS

Internal operating proof | Evidence review | Improved standard work | Transfer-readiness decision

DAYS 91-120 - PACKAGE FOR CUSTOMER DEPLOYMENT

- Translate each internal proof into a customer playbook with prerequisites, assumptions, adaptation points, controls and owner map.
- Create sales-to-delivery language that distinguishes platform capability from the managed operating outcome.
- Design customer adoption, enablement and outcome-review assets.
- Establish a portfolio cadence to scale, adapt, hold or stop patterns and harvest learning across customers.

OUTPUTS

Deployment playbooks | Customer evidence plan | Adoption package | Portfolio-review cadence

DECISION DISCIPLINE

Scale when the outcome is repeatable, risk is acceptable, ownership is clear, economics are credible and adaptation burden is low. Adapt when the core is sound but context matters. Hold when evidence, authority, security, ownership or adoption is incomplete. Stop when value or trust is insufficient.
